

Your Bumper. Our Challenge.

Did you know that different parts on your car can vary in color?

We know. You just want your car to come back to you looking factory perfect. And we want to get as close to a factory finish as possible.

What you may not realize is that few vehicles leave the factory with a perfect color match between body and bumper. You probably never noticed a difference because you had no reason to check. Until you needed a repair.

Why the difference? Simply because most bumpers contain plastic, which must be painted with different application techniques than metal.

Rest assured we use the best paints and processes from Axalta Coating Systems to help ensure the best finish for your vehicle body and bumper.

We are proud to paint your vehicle with Spies Hecker®.
